

Landing Page Setup & Guide

Hello Muhammad

I've completed your landing page based on the requirements you shared. Below is a quick guide explaining what I used, how it works, and how you can easily manage it in the future.

Plugins Used (All Free)

I only used **3 free plugins** to design and develop this page:

1. **Elementor (Free version)** – Used for building the page layout and design.
2. **Contact Form 7** – Used to create the contact form (Name, Email, Message fields).
3. **Fluent Snippet** – Used to add small custom CSS code that controls extra styling (e.g., newsletter form design).

These plugins are 100% free and will continue to work without any paid upgrade.

How Fluent Snippet Works

Fluent Snippet is a lightweight plugin that allows you to add custom code (CSS, JavaScript, or PHP) without touching theme files. This keeps everything safe and organized.

How to Use Fluent Snippet for Custom CSS

- **Go to WordPress Dashboard → Fluent Snippet → Add New.**
- **Choose “CSS Snippet”** from the available options.
- **Paste your custom CSS code** into the editor box. Example:

```
.newsletter-form input[type="email"] {
    border-radius: 8px;
    padding: 12px;
    border: 1px solid #ccc;
}
.newsletter-form button {
    background-color: #0073e6;
    color: #fff;
    padding: 12px 24px;
    border: none;
    border-radius: 8px;
    cursor: pointer;
}
.newsletter-form button:hover {
    background-color: #005bb5;
}
```

- **Save & Activate** the snippet.

- Your custom styles will now apply across the site automatically.

Styling & Design Notes

- The entire page is designed with **Elementor free widgets** (so no premium requirement).
- I added **custom CSS** through Fluent Snippet to improve the newsletter form design.
- The design is **fully responsive** (works on desktop, tablet, and mobile).

Theme Compatibility

This landing page is **theme-independent**.

That means:

- It will **integrate perfectly** with any WordPress theme you are using now or plan to use later.
- You don't need to worry about compatibility issues.

Delivery & Editing

- You will receive the **.json file** of the Elementor landing page.
- You can **import it into any WordPress website** with Elementor installed.
- All text, images, and icons are **dummy/filler content**, so you can easily replace them with your own.

How to Import the .json File into Elementor

You'll receive the **Elementor JSON file** of your landing page. Here's how to use it:

1. Log in to your **WordPress Dashboard**.
2. Go to **Templates → Saved Templates** in the left menu.
3. Click the **Import Templates** button at the top.
4. Upload the **.json** file provided.
5. Once uploaded, you'll see the template listed.
6. To use it on a page:
 - Create a **new page** (Pages → Add New).
 - Click **Edit with Elementor**.
 - Inside Elementor, click the **folder icon** (Add Template).
 - Go to the **My Templates** tab.
 - Insert the imported landing page template.

In short: You have a modern, responsive landing page built with Elementor, Contact Form 7, and Fluent Snippet (all free). It works with any theme, is safe to customize, and can be updated anytime.
